

(b) *Policies*—(1) *Active non-Federal projects*. A levee owner's manual developed and distributed by the Corps will be provided to all sponsors of Active non-Federal projects. The levee owner's manual will include the standards that must be met to maintain an Active status in the Rehabilitation and Inspection Program. Levee owner's manuals will also be provided, upon request, to sponsors of Inactive non-Federal projects so that the sponsors may evaluate their projects and prepare for an IEI to gain an Active status in the RIP.

(2) *Federal projects*. The Operation and Maintenance Manual specified by 33 CFR 208.10(a)(10) will fulfill the requirement of providing a levee owner's manual if the Corps has not provided a separate levee owner's manual to the sponsor of a Federal project.

(c) *Procedural requirements*. Levee Owner's Manuals will be initially provided to non-Federal sponsors of Active flood control works during scheduled CEI's and IEI's. Sponsors of Inactive projects and private levee owners will be provided manuals upon written request to the responsible Corps district.

§ 203.52 [Reserved]

Subpart E—Emergency Water Supplies: Contaminated Water Sources and Drought Assistance

§ 203.61 Emergency water supplies due to contaminated water source.

(a) *Authority*. The Chief of Engineers is authorized to provide emergency supplies of clean water to any locality confronted with a source of contaminated water causing, or likely to cause, a substantial threat to the public health and welfare of the inhabitants of the locality.

(b) *Policies*. (1) Any locality faced with a threat to public health and welfare from a contaminated source of drinking water is eligible for assistance.

(2) Eligibility for assistance will be based on one or more of the following factors:

(i) The maximum contaminant level or treatment technique for a contaminant, as established by the Environ-

mental Protection Agency pursuant to the Safe Drinking Water Act (*see* 40 CFR 141), is exceeded.

(ii) The water supply has been identified as a source of illness by a tribal, State, or Federal public health official. The specific contaminant does not have to be identified.

(iii) An emergency (e.g., a flood or chemical spill) has occurred that has resulted in either: one or more contaminants entering the source on a sufficient scale to endanger health; or, the emergency has made inoperable the equipment necessary to remove known contaminants.

(iv) The presence of a contaminant is indicated on the basis of other information available.

(3) Corps assistance will be directed toward the provision of the minimum amount of water required to maintain the health and welfare requirements of the affected population. The quantity of water and the means of distribution will be at the discretion of the responsible Corps official, who will consider the needs of the individual situation, the needs of the affected community, and the cost effectiveness of providing water by various methods.

(4) If a locality has multiple sources of water, assistance will be furnished only to the extent that the remaining sources, with reasonable conservation measures, cannot provide adequate supplies of drinking water.

(5) Loss of water supply is not a basis for assistance under this authority.

(6) Water will not be furnished for commercial processes, except as incidental to the use of existing distribution systems. This does not prohibit the furnishing of water for drinking by employees and on-site customers. Water for preparing retail meals and similar personal needs may be provided to the extent it would be furnished to individuals.

(7) The permanent restoration of a safe supply of drinking water is the responsibility of local interests.

(8) Corps assistance is limited to 30 days, and requires the local interests to provide assurances of cooperation in a CA. (*See* subpart G of this part.) Extension of this 30-day period requires agreement (as an amendment to the previously signed CA) between the
